

PREScriptive AND CLOSED- LOOP CONTROL WITH REAL-TIME INSIGHTS

PAICe

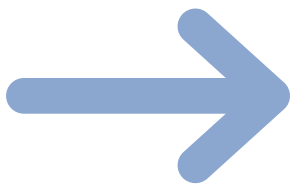

P R E S C R I P T I V E™

Detects early warning signs of equipment failure & enables proactive intervention before downtime impacts test handler and inspection operations.

Maintain high throughput & meet delivery commitments.

Smart Maintenance Diagnostics

**Real-time, AI-powered
Smart Maintenance
predicts failures early
and guides corrective
actions through
continuous feedback.**

***Avoids unnecessary
technician time, reduces
replacements & minimizes
repairs.***

Optimize Service Scheduling

**Forecast required
equipment service in
advance, enabling better
workforce planning,
improved tool
availability, & tighter
production scheduling.**

***Maximize uptime with
minimal disruption to
operations.***

Extend Equipment Lifetime

Proactive maintenance identifies mechanical and thermal issues early, such as bearing wear, air leaks, thermal drift, or mechanical misalignment.

Maximizing ROI and extending operational life.
